- Joined as core PHP developer and with in 4 months, I was able to work on CMS and MVC and developed Plugins/Modules in multiple open source frameworks

SELECTED PROJECTS

PHP, Laravel 5,
JavaScript,
Jquery,
AngularJS

Project 1: VizScreen (<https://vizrtscreen.com>)

- Developed **Website** for the media organization to create and edit their media screen designs.
- Developed keeping in mind the requirements of the media industry
- **There is no such product is available over the internet which can provide the solution at such price.**
- User will get the output video as it will design on the screen
- Developed whole website from scratch and worked around 8 months on this web application.

PHP, Magento,
Wordpress,
Javascript,
JQuery

Project 2: Report Shoes (<https://www.reportshoes.com>)

- A simple high performance e-Commerce website built using Magento and WordPress
- WordPress is used to manage the blogging section for the application.
- I developed most of it's blogging part and integration with Magento CMS.
- In Magento, I worked on the Reportig section in Admin part.
- Project came to me in maintenance and I was the single person who managed this project in company.

Core PHP,
Wordpress,
Custom CMS

Project 3: Advandate (<https://www.advandate.com>)

- An online dating solution which is running successfully in the United States, I developed number of sites on same platform for same client.
- Created WordPress based plugins for dating solutions (plugins)
- Created White Label Dating Solutions which has the same online dating features and functionality.
- I started work on it from scratch and gave service to client for more that 2 years..
- Also provided the service to the customers of the client who purchased the software from him.

Flutter, Dart,
FireBase,
Android

Project 4: OnAir+ (Hybrid Android Application)

- Mobile Application which replicates the features of VizScren Project.
- **Go Facebook Live with Graphics.**
- I designed and developed the whole application in Flutter/Dart.

React JS, Node
JS, API's

Project 5: Website Booster (<https://websitebooster.nl>)

- Feature loaded website to check and evaluate the performance of the given website URL.
- It will give the complete analysis report of the website so the user can enhance the performance of the website if needed,
- I made the dynamic design of the website.
- There were team of 2 members, I integrate all the APIs which evaluate the performance and other guy worked on the mailing and reporting modules.
